Introduction

WebScreenR (Web Screen Recorder) is a professional screen recording web application which allows you to record all the activities going on your screen. It not only can capture video from screen with sound, but also can edit your video. WebScreenR is ideal for use in technical support, sales and marketing, e-learning and more, offering a wide range of video creation and editing capabilities.

Features:

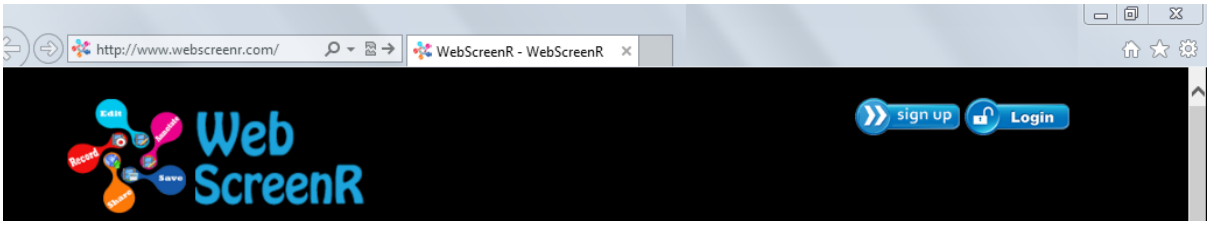
- No Installation or Downloading required.
- Easy recording accessibility for Mac and Microsoft PC.
- Capture, Edit and Share your required video from anywhere.
- Add image, sound and annotate to your desired videos.
- Save video in WebScreenR library.
- Reedit your saved video from WebScreenR library.
- Publish your video on Social Media.

Prerequisites:

- Java Runtime for browsers.
- Internet access.

Capturing your video

1. To get started, go to www.webscreenr.com

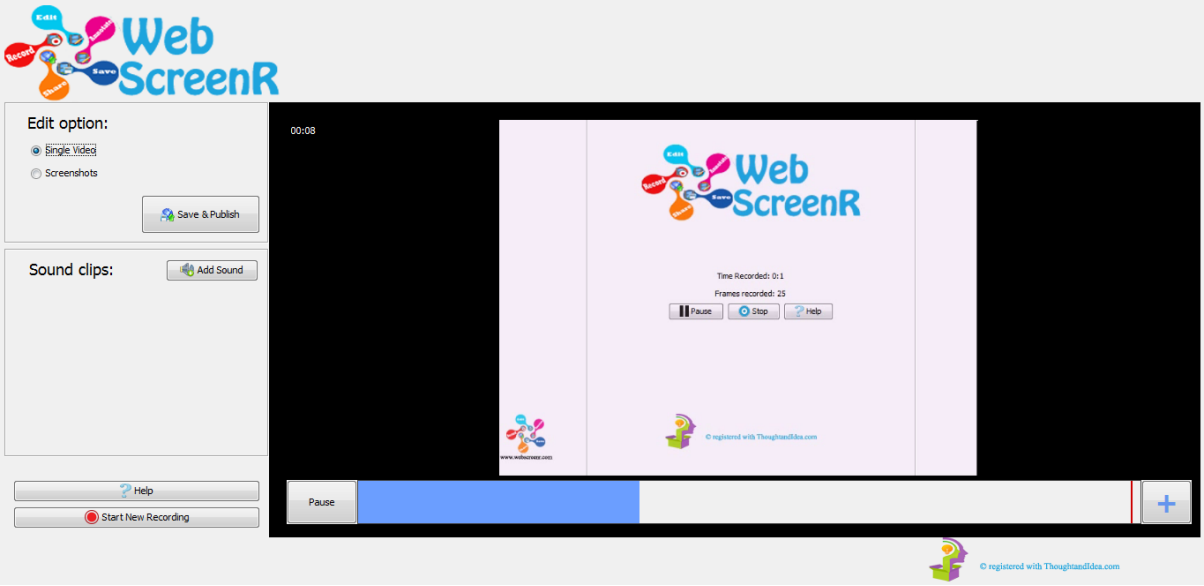


2. Click "**Record now**" button.
3. Register User Login in with your User ID and Password, click the **Studio** link or Click the **Record Video** button from WebScreenR Library.
4. If you get the below bar at the top of your browser, click **Run this time** or **Always run on this site**, if you plan to use WebScreenR a lot.
5. WebScreenR recorder studio page is displayed.

6. Select "**Capture Screen**" button.
7. If you have selected **Custom Screen** option you should get a box on your screen that you can adjust to fit the area you want to record. Before you start recording, look to the bottom of the box at the controls available to you. You will see a **Red** record button (do not click it yet), and then a microphone dropdown button. If you click this, you can choose your audio

source. Next to the audio button you will see a volume control. .

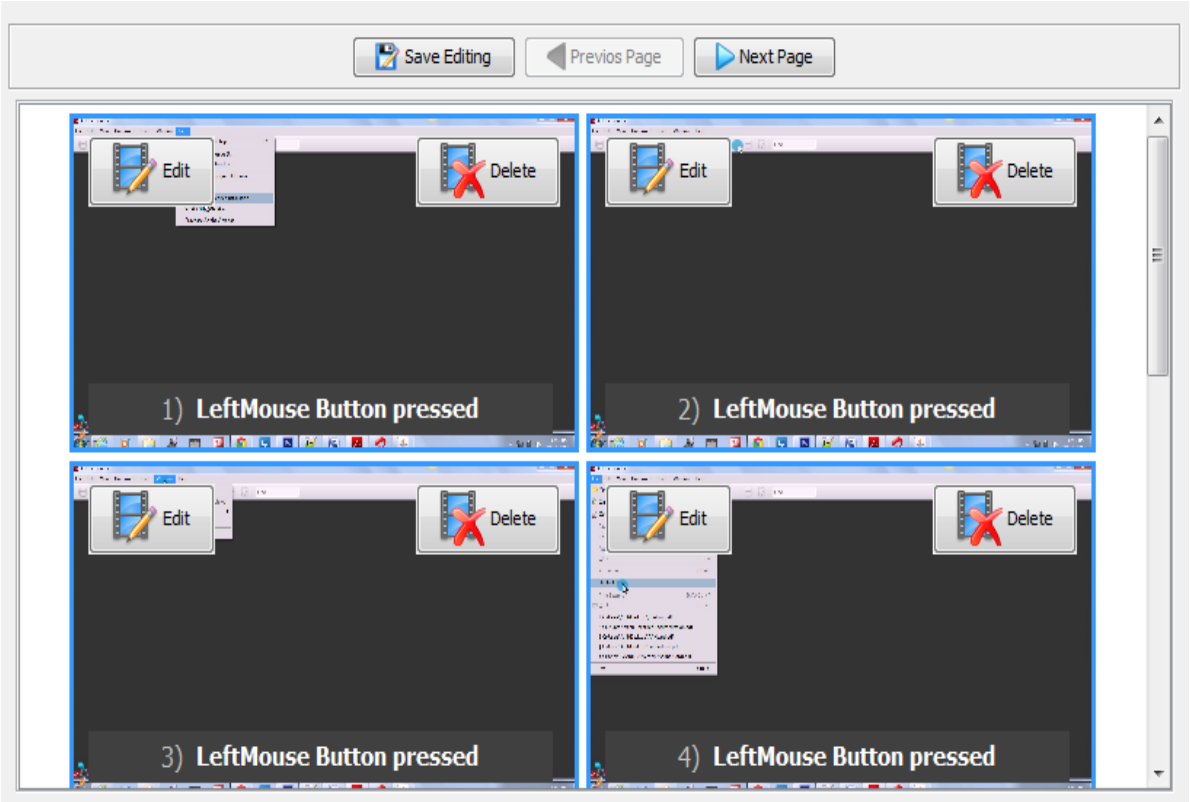
8. When you are ready, click the **Record** button to start your video. WebScreenR will count down from 3 and then start recording. At the bottom of the screen, you will see a few options while recording. You can Pause, or Stop (done). You also see the volume level and timer at the bottom. Take note that the limit on a WebScreenR video is 5 minutes for unregistered users.
9. When you are finished click the **Done** button, you will have a preview window come up. Here you can watch the video by clicking the play button in the bottom left corner of the window.
10. Capture video is displayed in WebScreenR preview screen



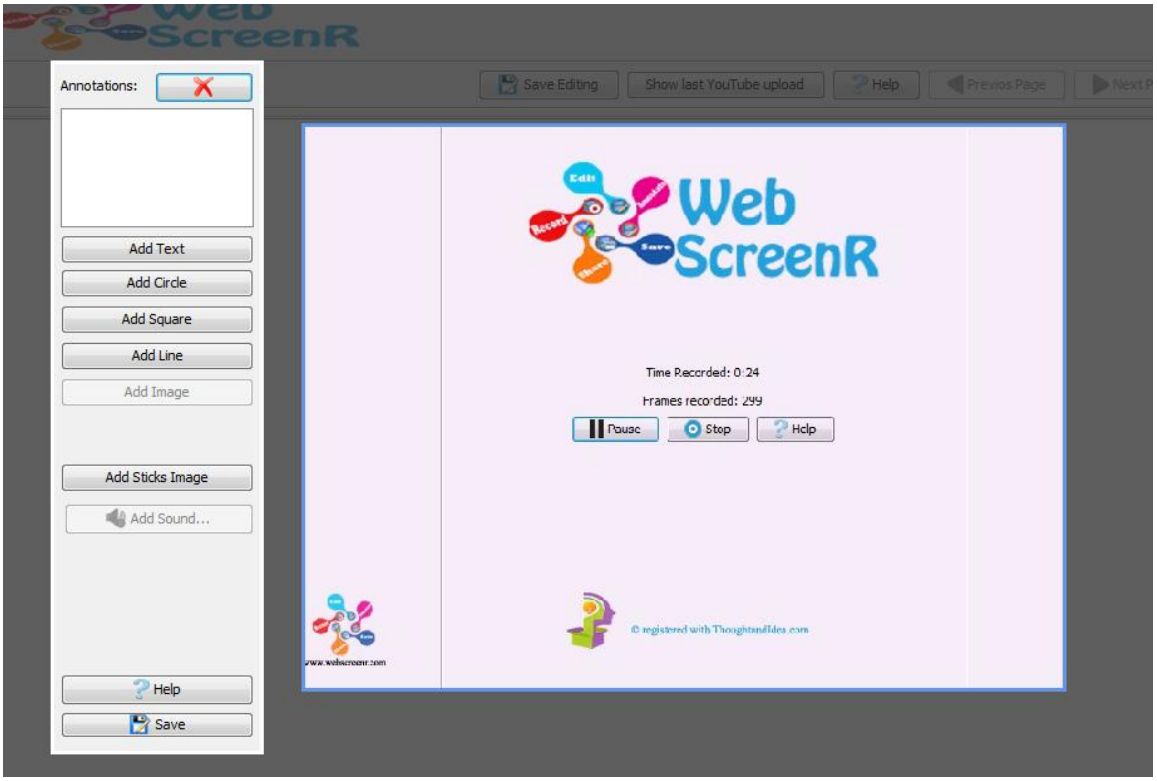
Note: This WebScreenR preview screen you can **save**, **edit** and **publish** video.

Editing your captured video

11. Select Screenshots option and click **Edit Screenshot** button
12. WebScreenR Editor studio is displayed



13. Select the screenshot and click the **Edit** button.
14. Selected screenshot is displayed in below screen.

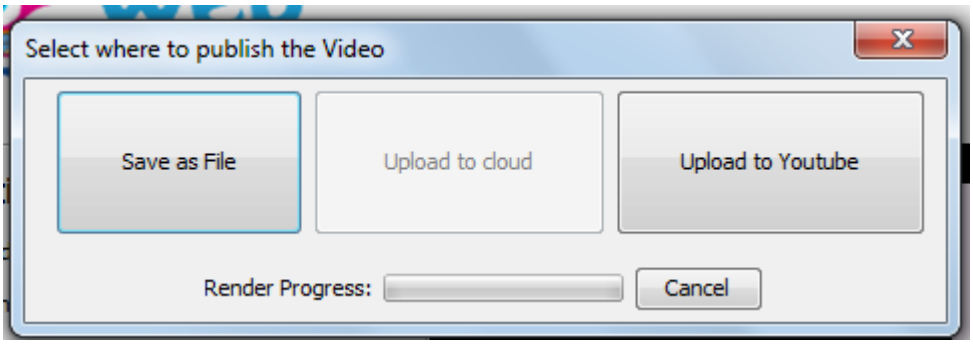


Note. You can Add and Delete Text, Circle, Square, Line, Image and Sound.

15. Click **Save** button once you have finished editing your screenshot.
16. Changed screenshot is displayed in WebScreenR Editor Studio.
17. Click **Save Editing** button which will take you to WebScreenR preview screen.

Using Save and Publish option

18. You can save and publish your video using Save & Publish button
19. The **Save & Publish** dialog is displayed



20. Then you have several options on the right side of the screen.
    a. You can publish to YouTube, click that link. Note: You need a Google Account to upload to YouTube
        i. Let it load, then fill out the form provided. Give it a title and description, then give it some tags (these are for if you want your video to be searchable. If you don't want that, leave this blank). Give it a category, and choose your

privacy setting (because “unlisted”. If you have a captions file, you can also upload that here.

ii. Click “Launch web browsers”

iii. When the browser opens, log into your Google account and then click “Allow Access”

iv. Click “Continue”

v. Then click “Upload to YouTube” and let it load. When it finishes you can click the link provided to see the video on YouTube.

b. To publish to a video file to your computer.
